

Courseware

The Datatraining product line is a continuously updated range of e-Learning courseware for the IBM mainframe and midrange environments.

The Datatraining courseware has been designed to assist Operations, Technical Support, and Programming staff perform their job tasks (at an advanced level) in environments covering IBM mainframe (z/OS, Linux, MVS, OS/390, VSE) IBM midrange (iSeries), and TANDEM (Himalaya).

Datatraining also covers software tool content from major vendors like CA and BMC.

Datatraining can take your team members through a range of skill and comprehension levels, with the ability to create learning plans to suit a learner's specific learning needs.

The curricula and courses are broadly classified into the following areas, but any combination of courses is available.

IBM Mainframe
IBM iSeries
Tandem
CA
BMC
OS/390 & z/OS

OS/390 Operations
OS/390 UNIX
Programming Languages
Security
Tandem
VSE

The Datatraining product line is the world's best selling technical IBM Mainframe e-learning courseware and contains over 250 courses distributed throughout Australia, New Zealand, Asia, Canada, the Middle East, South America, the UK, Europe and the USA. Datatraining has a reputation in the IT industry for producing innovative, high quality product that is competitively priced.

Datatraining, creator of the Datatraining product line, is an ISO 9001:2000 certified company.

Assessment

The Datatraining courseware range has been designed in a modular format, starting with curricula and dividing into courses, units, and then topics to allow for assessment at multiple content levels. Each of the courses has a mastery test at the end of the material which can also be used as a pre-test tool to develop more targeted, time efficient learning paths. Assessment exists down to the topic level to give you the flexibility you need to measure learner comprehension at a level that suits your organisation's learning requirements.

Delivery and tracking

The Datatraining browser-based courseware has been designed to provide delivery flexibility to organisations with the ability to deliver the courseware over an internet, the internet or via a stand-alone CD. An easy to use install wizard guides you through the installation choice that is most appropriate for your organisation.

The Datatraining courseware is both SCORM and AICC compliant, allowing the content to run on most Learning Management Systems (LMS). If your organisation does not yet have an LMS to track organisational learning outcomes, the Datatraining product comes with a basic student administration system that allows you to perform day-to-day functions, such as adding new students (with self registration), assigning courses, and reporting/analysis of student results.

System Requirements

The Datatraining Server application is designed to run on almost any PC. Its low system requirements make it quick and easy to both install and configure. Users wishing to access Datatraining require nothing more on their PC than a Web browser with JavaScript enabled and the Macromedia Flash 5 plug-in installed.
